Contingency Plan

How did your team prevent environment scene storage lost?
  - We had elements saved on separate USB drives, GitHub and DropBox.

How did your team deal with your batch renders not completed in time.
  - Worked on Saturday to start renders.
  - We discussed what scenes can be cut and how to shorten frame rates to shorten ` render times.
  - All personal computers and lab computers utilized to render.

  *If time permits, we can reshoot and render new scenes.

What happened if props not done in time?
  - Discussed what are the main props and what needs to be put aside.

How did you decide what to concentrate on in a time crunch?
  - Concentrate on set pieces and let go of trying to make it perfect.
  - Made sure that at least every scene is at least rendered, even if not perfect.
  - Might have to blend less favorable shots with better ones.
